

Corporate Capabilities Statement

Kingland Systems Corporation (KSC) is a Professional Services firm with a history of providing leading technical services to the financial service industry, helping to solve complex problems by providing world-class custom solutions.

Kingland Systems Corporation offers Solutions for:

- **Software Development:** KSC's approach to software solutions is focused on understanding the business problem and developing applications that meet the real needs through a strong balance of deep experience, application design and development.
- **Data Management:** KSC has over a decade of experience developing data solutions to meet unique and complex needs, and recently completed the world's largest data cleansing and management project for entity and financial securities information in support of global audit firms.
- **Data Center Management:** Kingland Systems Corporation operates an extensive data center, providing primary hosting and disaster recovery for many fortune 100 companies, hosting mission critical e-commerce applications with professional users from over 135 countries since 1995.
- **Managed Services:** KSC takes a process-based approach to managing infrastructure, and provides customized solutions, which allow you to focus your efforts on your application and users, while we take care of the rest.
- **Management Consulting:** KSC employs specialized industry and functional expertise to work with you to identify and understand your unique business problems and opportunities, recommending tailored solutions accordingly.
- **Business Process Outsourcing:** KSC's solution-based BPO leverages years of experience in developing, executing, and supporting mission-critical processes, applications, and systems for large, global companies.

Current Project Performance:

- Independence Application - enables global firms to ensure compliance with the U.S. SEC Auditor Independence Initiative
- Data Management Tool - empowers clients to institute rapid data management throughout their organization
- AccountPro - a robust back office solution that consolidates multiple data sources to provide the broker-dealer with Aggregated Broker View and Compliance Reporting solutions
- Options Black Box – an option routing solution which provides the ability to trade simultaneously on all U.S. options exchanges
- 360 Data - the definitive global database of legal entities, corporate hierarchies, and securities
