

Data Center Management

Kingland Systems Corporation (KSC) has over 15 years of experience running mission critical applications and systems in high-availability environments. Our current services range from management of real-time high availability services (including redundant geographical sites), to providing cold site recovery.

Kingland Systems Corporation offers Solutions for:

- **Data Center Infrastructure:** KSC is headquartered in a 200,000 sq ft. technology facility. KSC's data center facility is secure and scalable. The data center has multiple dock access areas for semi truck loading and unloading of equipment and supplies, and the infrastructure includes 4,000 tons of cooling capability, 12-inch tilt-up concrete walls, dedicated 13,200 volt substation with looped underground feed, and a modern cafeteria.
- **Systems Management:** KSC provides management of business critical systems and networks locally and remotely. Staffed 24x7, and managing security, data replication, and local and remote management of systems, our services have achieved award-winning recognition, and is trusted by the largest audit firms in the world.
- **Disaster Recovery:** In September 2001, our clients included trading firms just down the block from the World Trade Center. When the towers went down, the systems and services engineered and managed by KSC automatically switched to redundant systems, and on-line trading systems at their location continued to operate, even as our clients evacuated. KSC maintains primary and alternate facilities, and replicates data real-time, even using private microwave systems to backup telecommunication provider circuits.

Current Project Performance:

- Application Service Provider – supporting nearly 200,000 professional users world-wide in over 140 locations and over 38 languages
- Managed Services - 24x7 technology staff managing hardware, operating systems replication services and networks in our data centers and remote client data centers
- Disaster recovery – providing data center and technical systems and expertise, rapid business continuity for banks and others in the financial services industry
