

Managed Services

Kingland Systems has over 15 years of experience running mission critical applications and systems in high-availability environments. We take a process-based approach to managing infrastructure, and provide customized solutions that allow you to focus your efforts on your application and users, while we take care of the rest.

Kingland Systems Corporation offers Solutions for:

- **Network Management:** KSC's facilities and network infrastructure provide a hardened data center support capability for client systems, without the expense of building your own data center bunker and redundant network.
- **Network and Systems Security:** KSC provides thorough technology assessments, which focus on availability, security, data integrity, confidentiality, and flexibility. Through these assessments, KSC looks at redundancy planning and recovery time capabilities, as well as assessing the adequacy of your existing policies and practices to meet your business and security requirements.
- **24x7 Staffing and Monitoring:** From running your data centers and determining cost savings measures, to making sure your business can recover in the event of a disaster, KSC has a solution that will allow you to sleep better at night. Knowing that skilled engineers are taking care of your critical information and providing you the latest technology with 24 x 7 staffing and monitoring, is the reassurance you will get with us.

Current Project Performance:

- Application Service Provider – supporting nearly 200,000 professional global users
- High availability – award winning, industry recognized expertise in implementing and maintaining high availability systems
- Systems Management – Network and server management supporting billions in financial transactions monthly
- Remote Systems Management – Manage 24x7 business critical systems from across the world
