

## *Software Development*

Kingland Systems Corporation (KSC) develops software solutions for mission critical needs in the financial and regulatory compliance markets. KSC has created software used by hundreds of thousands of professional users, and supporting billions of dollars in financial transactions.

Kingland Systems Corporation offers Solutions for:

- **Software Design:** KSC's approach to software solutions is focused on understanding the business problem and designing applications that meet the needs of the business through function, security and scalability. Our design team has strong domain experience and works equally well with business and technology.
- **Custom Application Development:** KSC's software is typically custom-developed to fit the client's business needs, offering a robust, platform-neutral solution that can be implemented as a stand-alone application or integrated with other applications. Generally, clients choose to have KSC manage and maintain these systems in our world-class data center, managed by KSC technology staff.
- **Compliance:** KSC developed the only commercially available e-commerce solution that enables global firms to ensure compliance with the SEC Auditor Independence regulations. Currently, this application enables the world's largest accounting firms to ensure the independence of nearly 200,000 accounting and financial professionals worldwide.

### Current Project Performance:

- Independence Compliance Application - used by 3 of the top 5 global audit firms to ensure regulatory compliance
- Data Management Tools – support of data aggregation, cleansing, research and data management of nearly 900 million records
- Brokerage Tools - robust solutions that consolidate multiple data sources to provide the broker-dealer with aggregated broker view, trading, account management, and compliance reporting solutions
- Options Routing Engine – an option routing solution providing the ability to trade simultaneously on all U.S. options exchanges supporting billions of dollars in transactions monthly
