FOR IMMEDIATE RELEASE

KINGLAND SYSTEMS CORPORATION APPROVED AS NASDAQ OPTIONS TRADER

March 28, 2008 – Kingland Systems Corporation has become the newest Certified Service Bureaus and Software Provider for the NASDAQ Options Market.

Kingland Systems' Options Black Box (OBB) is a FIX compliant options routing engine that enables any order originator to eliminate the complexity and reduce the time required to connect to all seven U.S. option exchanges. OBB allows for tailored routing that can automatically apply a configurable set of client specific routing algorithms, routing by volume or routing by client designated exchange. Use a single connection from your Order Management System to OBB to gain all these advantages.

Kingland Systems is one of eight international companies to be certified.

About NASDAQ Certified Partners Program: The NASDAQ Certified Partners Program was created to inform market participants of which NASDAQ service bureaus provide the highest levels of NASDAQ functionality, access and timely implementation of enhancements. This program was designed to help customers make informed choices about which service bureau is the right solution for their business. The Certified Partners Program is an evaluation program that NASDAQ service bureaus must apply to when becoming a NASDAQ service bureau.
